I build **Software** with **JavaScript**!

I work with **React**, **React Native** and **Angular**, always focusing on improve the **UX** and create easy-to-use software.

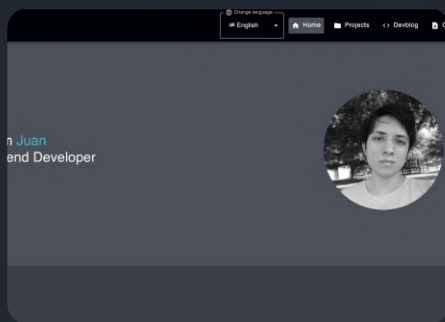

I'm learning about **Cloud** Computing with **Google Cloud Platform**, using **CI/CD** with **GitHub Actions** to deploy to **Cloud Run**, a **serverless** solution.

Projects

[Workarise](#) ← Try this app!

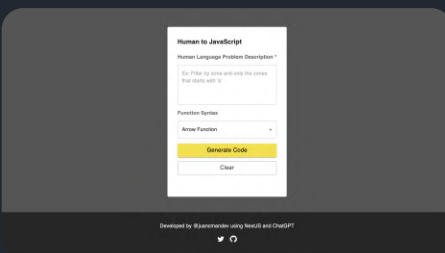

MVP developed with **React**, using **Firebase** as a Backend to increase the development speed. I've implemented functionalities like **Realtime Refreshing**, a **Calendar** to visualize tasks cards, create **Google Meets** inside the app, create tasks cards, and more. Thanks for all this we get our first users, and growing!

[My Web Site](#)

My biggest **personal** project so far, here I write and post some articles where I share my experience as a dev. Developed with **Next.js**, **Firebase** and deployed to **Google Cloud Platform** to **Cloud Run** using **CI/CD**.

I talk in more detail [here](#)

[Human to JS](#) ← Try this app!

App to generate **JavaScript** code using **ChatGPT** and **NextJS 13**, describe a problem and get the code in JavaScript and select which syntax to use. **Deployed** in **Vercel**.

[Azap](#) ← Try this app!

Hybrid mobile app developed with **Angular** and **ionic**, recurrent **billing** implemented with **Stripe** used to subscribe users to the services of the app. Implemented services to the **API** using **NodeJS**. I used the **Google Maps API** to create a functionality to determinate a range for services, and I created the **payment gateway** to register business and **card payments**.
