juancmandev@protonmail.com

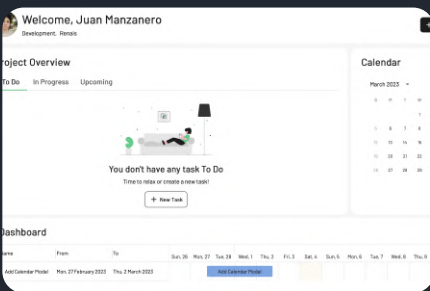

<https://juancman.dev/>

I build **Software** with **JavaScript**!

I work with **React**, **React Native**, and **Next.js**, always focusing on **improving** the **UX** and creating easy-to-use software.

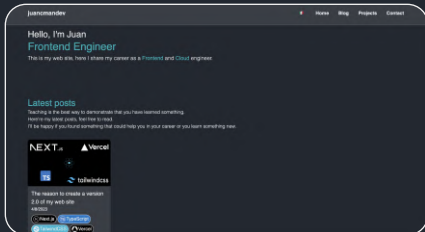

I've knowledge about **Cloud** Computing with **Google Cloud Platform**, focused on **serverless** solutions like **Cloud Run**, **Firebase**, and more.

Projects

Workarise ← Try this app!

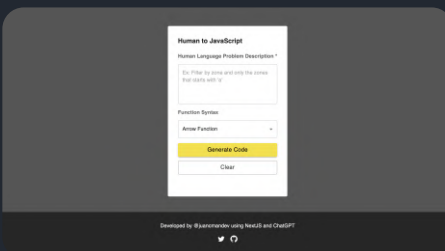

MVP develop with **React**, using **Firebase** as a Backend to increase the development **speed**. I've implemented functionalities like **Realtime** Refreshing, a **Calendar**, a **Gantt** to visualize task cards, a feature to create **Google Meets** inside the app, creating task cards with a modal, and more. More details [here](#).

Website 2.0

A new version of my website optimized for **SEO** using **Next.js 13** and **TailwindCSS** to create all blog posts and projects with **Static Generation**. It provides an option to switch to Spanish/English. Deploy on **Vercel**.

I explain in more detail [here](#).

Human to JS ← Try this app!

App to generate **JavaScript** code using **ChatGPT** and **Next.js**, describe a problem, then generates the code in JavaScript and select which syntax to use. Deploy on **Vercel**.

I explain in more detail [here](#).

Azap ← Try this app!

Hybrid mobile app developed with **Angular** and **ionic**, recurrent billing implemented with **Stripe** used to subscribe users, implementing services to the **API** using **Node.js**.

I used the **Google Maps API** to set locations and range areas. I developed a payment gateway to register business and card payments.

You can check more projects [here](#).
